

**BG - BH**

***MOTORI ORBITALI***

**HYDRAULIC MOTOR SERIES**

## CARATTERISTICHE DEL MOTORE MOTOR FEATURES

Una ampia gamma di valvole flangiabili, è disponibile su richiesta.  
A wide range of flangeable valves are available on request.

Foro di drenaggio posteriore per un facile collegamento.  
Rear drain port for easier connection.

Flangia a 2 e 4 fori.  
2 bolts and 4 bolts mounting flange option.

Albero cilindrico  $\varnothing 25$  mm e  $\varnothing 25.4$  mm oppure scanalato  $\varnothing 25$  mm.  
0.97 in straight, 1 in straight, 0.97 in splined option.

7 viti coperchio posteriore in acciaio ad alta resistenza per sopportare gli sforzi causati dall'alta pressione.  
7 rear cover bolts made of high tensile steel to resist the stress caused by high pressure.

Profilo del gerotor del tipo ad alto rendimento per elevate prestazioni e durata.  
High efficiency profile gerotor set.

Parapolvere per proteggere la guarnizione dell'albero dalle impurità.  
Dust seal to protect the seal from dust.

Valvola di distribuzione integrata nell'albero di distribuzione. Tolleranze molto ridotte assicurano un basso drenaggio.  
Spool valve integral to the output shaft featuring optimized clearance geometry and so minimizing the oil slippage.

Il profilo delle cave assicura un azionamento morbido e silenzioso anche alle velocità più basse.  
Optimized grooves profile to ensure smooth and quiet running even at very low speed.

1) Le condizioni intermittenti non devono durare più del 10% di ogni minuto. Intermittent duty must not exceed 10% every minute.

2) Le condizioni di picco non devono durare più del 1% di ogni minuto. Peak duty must not exceed 1% of every minute.

Pressione massima di scarico senza drenaggio o massima pressione nella linea di drenaggio. I motori sono forniti nella versione con guarnizioni standard (diagramma Standard) o nella versione con guarnizioni ad alta pressione (diagramma HPS).

Per condizioni di pressione e velocità non contemplate dal presente grafico si consiglia di contattare la S.A.M. Hydraulik.

N.B.: Sulla versione TAC/U non è possibile installare guarnizioni HPS.

Max. return pressure without drain line or max. pressure in the drain line.

Motor are supplied in standard seal version (Standard chart) or in HPS seal version (HPS chart).

For pressure and speeds not showed in the curve below, please contact S.A.M. Hydraulik.

N.B.: TAC/U version is not available with HPS seals.

**STANDARD**

Nei motori senza le valvole interne di drenaggio, la pressione sulla guarnizione (ph) è la media tra le pressioni di alimentazione e di scarico del motore. Se ph supera il valore consentito (vedi grafici in questa pagina), occorre aprire il drenaggio.

In the motors without built-in check valves, the (ph) pressure on the seal is the average between inlet and return pressure. If ph exceeds the allowed values (see the curves in this page), the drain line must be connected.

$$Ph = \frac{pi + pr}{2} [\text{bar}]$$

ph = pressione in carcassa  
 pi = pressione di alimentazione  
 pr = pressione di scarico

ph = housing pressure  
 pi = inlet pressure  
 pr = outlet pressure

**HPS**

Nei motori con le valvole interne di drenaggio, la pressione sulla guarnizione (ph) è uguale alla pressione di scarico del motore. Se ph supera il valore consentito (vedi grafici in questa pagina), occorre aprire il drenaggio.

In the motors with built-in check valves, the (ph) pressure on the seal is equal to the motor return pressure. If ph exceeds the allowed values (see the curves in this page), the drain line must be connected.

# CODICI DI ORDINAZIONE ORDERING CODES

Le seguenti lettere o numeri del codice, sono state sviluppate per identificare tutte le configurazioni possibili dei motori BG. Usare il seguente modulo per identificare le caratteristiche desiderate. **Tutte le lettere o numeri del codice devono comparire in fase d'ordine.** Si consiglia di leggere attentamente il catalogo prima di iniziare la compilazione del codice di ordinazione.

The following alphanumeric digits system has been developed to identify all of the configuration options for the BG motors. Use the model code below to specify the desired features. **All alphanumeric digits system of the code must be present when ordering.** We recommend to carefully read the catalogue before filling the ordering code.

Sensor connection M8x1

**ATTENZIONE:**

- L'alberino contagiri ha velocità pari a 6 volte quella dell'albero primario del motore e senso di rotazione opposto.
- N.B. Non sono accettati carichi assiali o radiali sull'albero contagiri. Coppia massima trasmissibile 1Nm.
- Il motore viene fornito senza il sensore elettronico: se necessario, richiederlo in fase di ordinazione.
- Pressione massima ammessa sulla guarnizione dell'albero contagiri con drenaggio chiuso: 25 bar.

**WARNING:**

- Tacho shaft has a 6 times higher revolution speed than the motor shaft and opposite direction of rotation.
- NOTE: Axial or radial load on tacho shaft must be avoided. Max torque on tacho 1 Nm [0.73 lbf-ft].
- The electronic sensor is not supplied: if required, please state it clearly on order form.
- Max pressure admissible on the shaft seal with closed drain port 25 bar [363 psi].

**ELECTRONIC SENSOR TECHNICAL FEATURES**

Segnale in uscita versione elettronica  
Output signal electronic tacho

Numero d'impulsi per giro = 90  
Principio di funzionamento induttivo  
Funzione di uscita PNP  
Tensione nominale 10-65 V d.c.  
Caricabilità massima 300 mA  
Frequenza massima 10000 Hz  
Campo di temperatura -25C +85C  
Grado di protezione IP 67

Versioni disponibili:

- Sensore con cavo a tre fili lunghezza 2 metri (cod.424.0050.0000)
- Sensore con attacco per connettore tipo binder (cod.424.0060.0000) + connettore tipo binder
- con cavo a tre fili lunghezza 5 metri (cod.424.0080.0000)

Number of pulses per revolution = 90  
Inductive principle  
Output current PNP  
Voltage 10-65 V d.c.  
Max load 300 mA  
Max frequency 10000 Hz  
Temperature range -25C +85C  
Enclosure IP 67

Available versions:

- Sensor with 2 metres three wires cable (cod.424.0050.0000)
- Sensor with binder plug connection (cod.424.0060.0000) + binder connecting
- plug with 5 metres three wires cable (cod.424.0080.0000)

Il diagramma è stato ottenuto con prove eseguite su un numero significativo di motori, utilizzando un'olio avente una viscosità cinematica di 37 cSt alla temperatura di 45° C.

Diagram according to tests done with a huge number of motors and using hydraulic oil with kinematic viscosity of 37 cSt at 45° C temperature.

## CARICHI AMMESSI SULL'ALBERO SHAFT LOAD CAPACITY

I carichi ammessi sull'albero variano in funzione di:

- Velocità (n)
- Distanza (L) dal punto di applicazione del carico alla flangia di montaggio
- Versione della flangia di montaggio

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "2A" ovale 2 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 2-bolt flange type "2A"

The permissible radial shaft load depends on

- Speed (n)
- Distance (L) from the point of load to the mounting flange
- Mounting flange version

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "S4" 4 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 4-bolt flange type "S4".

La curva mostra la relazione tra (Pr) e (n) quando:

- L= 30 mm [1.18 in] per motori flangia 2A
- L= 24 mm [0.95 in] per motori flangia S4

The curve shows the relation between (Pr) and (n)

- L= 30 mm [1.18 in] for motors with 2A flange
- L= 24 mm [0.95 in] for motors with S4 flange

1) Le condizioni intermittenti non devono durare più del 10% di ogni minuto. Intermittent duty must not exceed 10% every minute.

2) Le condizioni di picco non devono durare più del 1% di ogni minuto. Peak duty must not exceed 1% of every minute.

Pressione massima di scarico senza drenaggio o massima pressione nella linea di drenaggio. I motori sono forniti nella versione con guarnizioni standard (diagramma Standard) o nella versione con guarnizioni ad alta pressione (diagramma HPS).

Per condizioni di pressione e velocità non contemplate dal presente grafico si consiglia di contattare la S.A.M. Hydraulik.

Max. return pressure without drain line or max. pressure in the drain line.

Motor are supplied in standard seal version (Standard chart) or in HPS seal version (HPS chart).

For pressure and speeds not showed in the curve below, please contact S.A.M. Hydraulik.

## STANDARD

## HPS

$$Ph = \frac{pi + pr}{2} [\text{bar}]$$

*ph* = pressione in carcassa  
*pi* = pressione di alimentazione  
*pr* = pressione di scarico

ph = housing pressure  
pi = inlet pressure  
pr = outlet pressure

- La pressione in carcassa senza drenaggio è data dalla media tra *pi* e *pr*.
- Il motore BH è fornito con drenaggio (STANDARD)
- La massima pressione di scarico con drenaggio è di 138 bar Cont.
- The case pressure without drain line is the average between inlet and return pressure.
- As standard, BH motors are supplied with drain port.
- Max. permissible return (back) pressure with drain line 138 bar [2000 psi] Cont.

Le seguenti lettere o numeri del codice, sono state sviluppate per identificare tutte le configurazioni possibili dei motori BH. Usare il seguente modulo per identificare le caratteristiche desiderate. **Tutte le lettere o numeri del codice devono comparire in fase d'ordine.** Si consiglia di leggere attentamente il catalogo prima di iniziare la compilazione del codice di ordinazione.

The following alphanumeric digits system has been developed to identify all of the configuration options for the BH motors. Use the model code below to specify the desired features. **All alphanumeric digits system of the code must be present when ordering.** We recommend to carefully read the catalogue before filling the ordering code.

I carichi ammessi sull'albero variano in funzione di:

- Velocità (n)
- Distanza (L) dal punto di applicazione del carico alla flangia di montaggio
- Versione della flangia di montaggio

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "6A" ovale 6 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 6-bolt flange type "6A".

$$Pr = \frac{800}{n} \cdot \frac{242000}{97 + L} \text{ [N]}$$

The permissible radial shaft load depends on

- Speed (n)
- Distance (L) from the point of load to the mounting flange
- Mounting flange version

Formula utilizzabile per il calcolo del carico radiale (Pr) ai vari numeri di giri (n), e alle varie distanze (L) dalla flangia tipo "S4" 4 fori.

Radial load capacity (Pr) curve according to speed (n) and distance (L) from flange, valid for the 4-bolt flange type "S4".

La curva mostra la relazione tra (Pr) e (n) quando:

- L = 24 mm [0.95 in] per motori flangia S4 e 6A

The curve shows the relation between (Pr) and (n)

- L = 24 mm [0.95 in] for motors with S4 and 6A flange
